
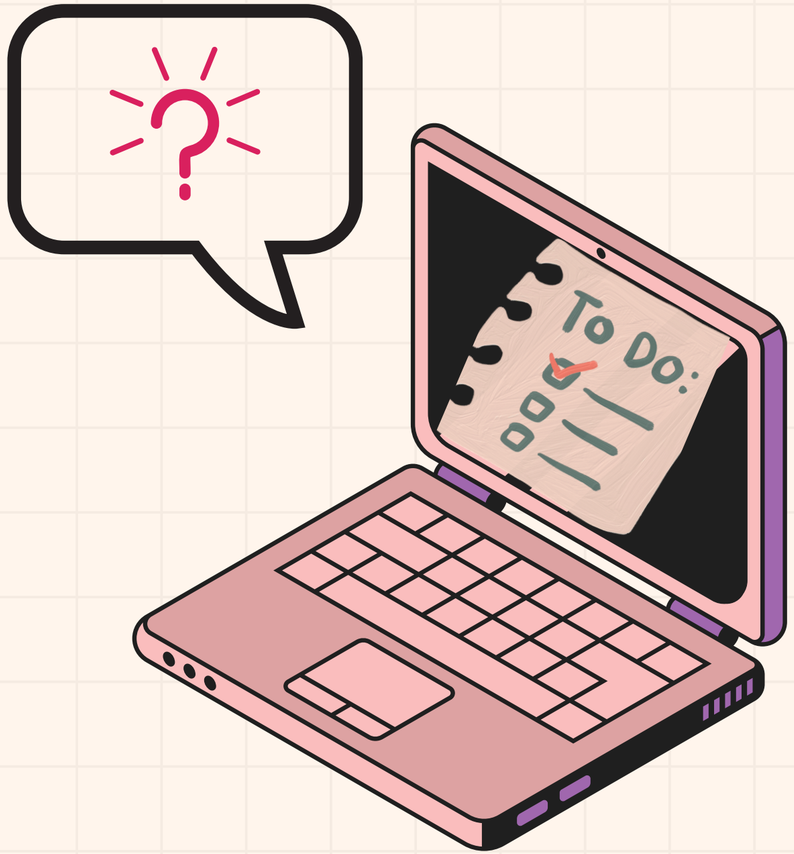
BALANCIA

By FiveGals

WHY & OBJECTIVE

Manual task management is slow and biased. Teams often spend more time talking about work than actually doing it, leading to missed deadlines, unfair workloads, and "free-riding" in group projects.

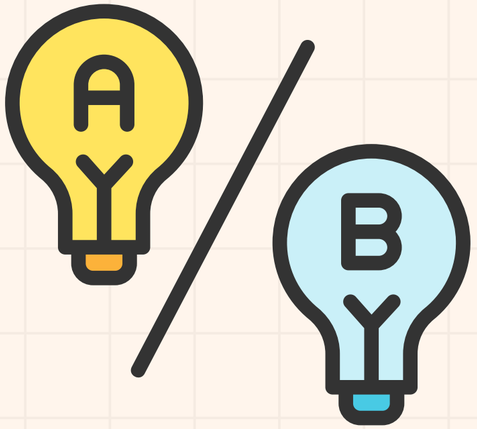
To eliminate the friction of manual delegation. Balancia turns vague natural language goals into fair, structured roadmaps, allowing teams to focus on execution rather than administration.



TARGET & COMPARISON

TARGET USERS

- **Startups:** Founders who need to scale fast without the "management" headache.
- **Student Groups:** A "neutral AI leader" to balance university assignments and prevent free-riding.
- **Project Managers:** Leaders who want to monitor burnout and team capacity in real-time.

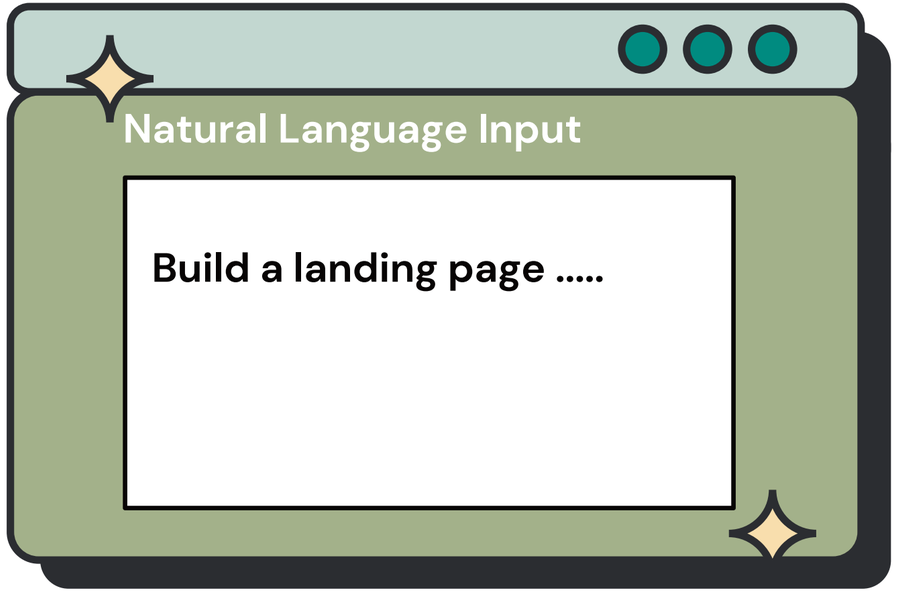


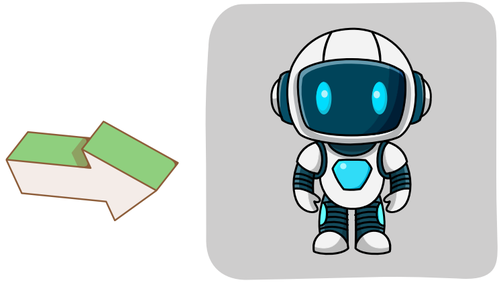
COMPARE WITH OTHER TOOLS

While standard tools like Trello or Asana act **passively,** where you must manually input every task and guess your resource allocation, Balancia is **proactive**. We automate the entire project lifecycle, transforming your natural language goals into a sequence of tasks, matching them to the right people based on their specific skills and MBTI, and monitoring team health to prevent burnout before it happens.

CORE MVP FUNCTIONS

VAGUE GOALS TO TASK ALLOCATION





Structured Goal and
Smart Task Allocation

- NLP
- Data Matching
- Automated Distribution

UI / UX

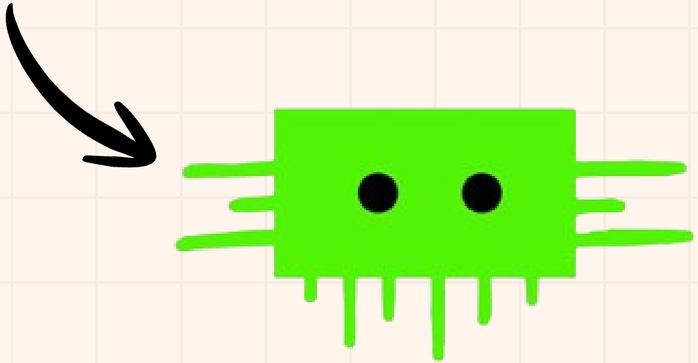
UI

- Balancia **mascot integrated** into the interface
- Interactive and responsive animations
- Enhances first impression and user engagement

UX

- Two-stage workflow: Goals → Dashboard
- **Accepts vague inputs** (natural language)
- Centralized dashboard for tasks, team, and progress
- Clear transition from planning to execution

MASCOT OF BALANCIA



PROBLEMS

1. **Unclear goals**

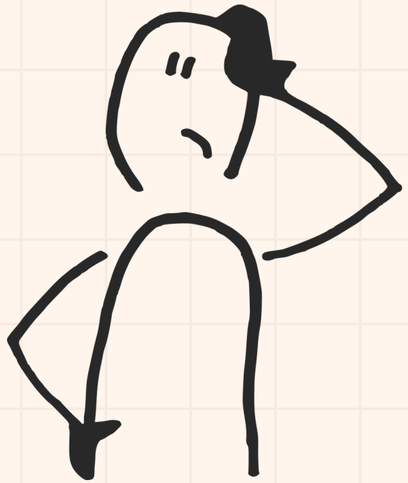
- Balancia address this by **transforming vague into actionable tasks** by automatically splitting goasl into structured tasks

2. **Inefficient task allocation**

- Balancia using **data-driven matches** instead of manual assignment
- Track continuosly track progrss across dashboards, giving full visibility into goals, tasks and employee performance.

3. **Overwork**

- Balancia implemented **automated overwork detection**
- working hours and deadline are monitored to trigger alerts and recommend task redistribution when neccessary.



FUTURE FEATURES

1. **Tool Integration**

- Integrate with tools like **Google Drive and Microsoft Teams**
- Create seamless workflow

2. **Include Gantt Charts**

- Better project visulaization
- **Tasks meet requirements**

3. **Hiring or Outsourcing Suggestions**

- **Workload exceeds capacity**
- System more scalable

THANK YOU !
